	<u>Page</u>
REPORT DOCUMENTATION PAGE (DD Form 1473)	i
PREFACE	iii
INTRODUCTION	1
NEW TAB DESIGN	3
Selection of Tab Materials	3
Fabrication Procedure	4
Material Characterization	5
EXPERIMENTAL PROCEDURE	5
RESULTS ON STRESS CONCENTRATION	6
SHEAR MODULUS	7
SHEAR STRENGTH	9
CONCLUSION	11
REFERENCES	12

LIST OF TABLES

<u>Table</u>		<u>Page</u>
1	Properties of Tapping Materials	14
2	Comparison of Apparent Stiffness Modulus	15
3	Comparison of Shear Modulus	16
4	Ultimate Sresses of Off-Axis Specimens	17
5	Comparison of Ultimate Shear Strength	18

LIST OF FIGURES

<u>Figure</u>	<u>Page</u>
1 Unconstrained (a) and Constrained (b) Deformations in an Off-Axis Composite Specimen	19
2 Extension-Shear Coupling for Different Composite Materials	20
3 Specimen Geometry (not to scale)	21
4 Comparison of Finite Element and Experimental Results for a 10° Off-Axis Specimen Using Conventional Glass/Epoxy End Tabs	22
5 Strains at Four Locations in a 10° Off-Axis Specimen Using the New Fiberglass Knit Tabs	23
6 Strains Produced in a Specimen with 4 Inch Gage Length	24
7 Strains Produced in a 3/4 Inch Specimen	25
8 Strains Produced in a 10° Off-Axis Coupon Using Unbonded Fiberglass Epoxy Tabs	26
9 Specimen Geometry and Strain Gage Arrangement for Modulus and Strength Measurements	27
