<u>Table of Contents</u>	iv
<u>List of Figures and Tables</u>	vii
HOW TO READ THIS GUIDE	1
1. STATISTICS AND MATERIALS ENGINEERING	6
1.1 Introduction	6
1.2 Material Classes	6
1.2.1 General Material Considerations.....	6
1.2.2 Metals.....	7
1.2.3 Ceramics	8
1.2.4 Polymers	9
1.2.5 Composites	11
1.2.6 Elastomers	13
1.2.7 Specialty Materials.....	14
1.3 Material Properties	14
1.3.1 Mechanical.....	15
1.3.2 Electrical.....	17
1.3.3 Thermal.....	17
1.3.4 Optical.....	17
1.3.5 General Testing Issues.....	17
1.4 Design and Manufacture	18
1.4.1 Processing.....	18
1.4.2 SPC and SQC	18
1.4.3 Design Allowables	19
1.4.4 Standards.....	19
1.4.5 Data Pedigree.....	20
1.5 Accepting and Rejecting Data	20
2. DATA, ITS QUALITY AND PEDIGREE	22
2.1 Summary	22
2.2 Introduction	22
2.3 Data and Metadata	24
2.4 Types of Data and Databases	26
2.5 Data Accreditation	28
2.6 An Illustrative Example of Data Comparison	30
2.7 Uses and Cost of Good Data	30
2.8 Statistical Characteristics of Good Data	32
2.9 Some Statistical Sampling Schemes and their Characteristics	33
2.10 Conclusions	35
3. STATISTICAL DISTRIBUTIONS, RANDOM VARIABLES, DISTRIBUTIONS AND PARAMETERS	36
3.1 Summary	36
3.2 Statistical Distributions - Generalities	36
3.3 Three Distributions of Interest in Material Data Analysis	40

3.3.1	The Normal Distribution.....	40
3.3.2	The Lognormal Distribution.....	41
3.3.3	Weibull Distribution.....	43
3.3.4	Distribution Parameters.....	44
3.4	Example of Material Exploratory Data Analysis.....	49
3.4.1	Example from the Normal Distribution: the “samnor” data set.....	52
3.4.2	Example from the Lognormal Distribution: the “samlog” data set.....	54
3.4.3	Example from the Weibull Distribution: the “samweb” data set.....	56
3.5	Extreme Values or Outliers.....	57
3.6	Conclusions and Summary.....	59
3.7	Suggested Further Reading.....	60
4.	ESTIMATION AND TESTING.....	61
4.1	Summary.....	61
4.2	Estimation.....	61
4.2.1	Sampling Revisited.....	61
4.2.2	Point Estimation.....	62
4.2.3	The Central Limit Theorem.....	62
4.2.4	Interval Estimation of the Mean.....	64
4.2.5	Confidence Bounds.....	67
4.2.6	Tolerance Limits.....	67
4.2.7	Weibull Distribution.....	69
4.2.8	Other Distributions.....	69
4.2.9	Confidence Intervals for Other Distributions.....	70
4.3	Hypothesis Testing.....	71
4.3.1	Testing for the Mean.....	71
4.3.2	A Conceptual Comparison.....	73
4.3.3	Step-by-Step Testing Procedure.....	74
4.3.4	Other Issues About Hypothesis Testing.....	75
4.3.5	Goodness-of-Fit Tests.....	76
4.4	Summary and Conclusions.....	80
4.5	Suggested Further Reading.....	80
5.	MULTIVARIATE STATISTICS.....	81
5.1	Introduction.....	81
5.2	The Case of Bivariate Data.....	81
5.3	Contingency Tables.....	82
5.4	Regression Analysis.....	84
5.5	ANOVA (one way analysis of variance).....	95
5.6	Non-Parametric Alternatives to ANOVA.....	99
5.7	Summary.....	101
5.8	Suggested Further Readings.....	102
6.	CASE STUDIES WITH ANOVA.....	103
6.1	Summary.....	103
6.2	Introduction and Background.....	103
6.3	Case Examples.....	107
6.3.1	Case 1: A Simple Data Set.....	107
6.3.2	Case 2: A More Complicated Data Set.....	110
6.3.3	Case 3: One-Way ANOVA Revisited.....	113
6.3.4	Case 4: A Large Data Set With Two Factors.....	117
6.4	Summary.....	125
6.5	Suggested Further Readings.....	125
7.	CASE STUDIES WITH REGRESSION.....	126

7.1	Summary	126
7.2	Introduction	126
7.3	Case Studies	128
7.3.1	Case One: An Example In Stress-Strain Curves.....	128
7.3.2	Case Two: Surface Damage Example Revisited: Modeling The Data.....	133
7.3.3	Case Three: Ex3.Dat Revisited: Regression Data Constraints.....	135
7.3.4	Case Four: A Small But More Complex Data Set.....	136
7.4	Conclusions	147
7.5	Suggested Further Readings	147
8.	CONCLUSIONS	148
8.1	Summary	148
8.2	What Has Been Accomplished	148
8.3	Data and Software	149
8.4	Future Work	150
Appendix A: Bibliography		154
Appendix B: Recipe Data Sets Description		156
Appendix C: Data Sets Used in Data Analyses		164

List of Figures and Tables

Figure 1	Statistical Distributions and Material Behavior	7
Figure 2	Atomic Arrangement of a Typical Metal	7
Figure 3	Atomic Arrangement of a Typical Ceramic	9
Figure 4	Monomers and Polymers	9
Figure 5	Morphology of a Thermoplastic Polymer	10
Figure 6	Morphology of a Thermosetting Polymer.....	10
Figure 7	The Effect of Molecular Weight Distribution on Mechanical Properties	11
Figure 8	Structure of a Fiber-Reinforced Composite	12
Figure 9	Fiber Orientation's Effect on Behavior of Polymer-Matrix Composites	13
Figure 10	Typical Structure of an Elastomer	14
Figure 11	Distribution Type and Shape Indicative of Material Behavior and Variability.....	15
Figure 12	Sources of Error in Strength Data.....	16
Figure 13	Mass Function (Pattern) for X.....	38
Figure 14	Normal Distribution Example	41
Figure 15	LogNormal Density Function	42
Figure 16	Example of Weibull Distributions.....	44
Figure 17	Probability Plot Example	54
Figure 18	Distribution of the Test Statistic under the Null Hypothesis (H_0)	71
Figure 19	Normal Probability Plot and AD Test.....	78
Figure 20	Anderson Darling Normality Test	90
Figure 21	Time Series Plot	91
Figure 22	Probability Plot.....	98
Figure 23	MIL-HDBK-17 ROADMAP.....	104
Figure 24	Anderson-Darling Normality Test.....	108
Figure 25	Probability Plot.....	118
Figure 26	Probability Plot for Subset 1	119
Figure 27	Probability Plot for Subset 2	120
Figure 28	Regression Analysis Roadmap.....	127
Table 1	Statistical Distributions May Be Indicative of Intrinsic Material Behavior.....	16
Table 2	Possible Outcomes for a Pair of Honest Dice	36
